NEW

Nouvelle ligne FINISH LINE 62090 - Nouvelle qualité PHH | New line FINISH LINE 62090 - New quality PHH

The new Finishing Line is the combination of the most refined inserts and the most stable shanks. When looking for a finishing solution for Steels, Stainless steels, Cast Irons, HRSA or Hardened Steels that can work for a long time while delivering a flawless machined surface, this is the best solution.

WCL

WCR

One toolholder for two types of inserts

phh grade - PVD grade

This TiAlSiN coating has a very high thermal stability and provides long tool life. For applications in machining of hardened steels, stainless steels and titanium alloys.

P - STEEL

M - STAINLESS STEEL

K - CAST IRON

S - HEAT RESISTANT / TITANIUM ALLOYS

H - HARDENED MATERIALS

- High Insert tolerances;
- Reduced cutting forces due to a high helix angle shape result in a smoother machining with less vibration.

Procedures for clamping screws

1. Check the insert seat.

Before assembly cutter it is important to ensure that the insert seat has not been damaged during machining or handling.

2. Clean the insert seat.

Make sure that the insert seat is free from dust or chips from the machining. If necessary, clean the insert seat with compressed air.

3. Position the insert.

Position the insert with the top face marking in the direction of screw placement and couple the insert into the cutter.

4. Lubricate the insert screw.

Apply sufficient screw lubrication to prevent seizure. Lubricant should be applied in small quantity to the screw threads.

5. Always use a torque wrench to ensure that screws are correctly tightened (please confirm torques data). Torque that is too high will negatively affect the performance of the tool and can cause screw and insert breakage. Torque that is too low will cause insert movement, vibration and degrade the cutting result. Dedicated adjustable torque wrench can be ordered separately. Please do not press down the insert during tightening process.

Note: Always replace worn or damaged screws.
